

Surreal Composite Campaign

F-P-MM12-1.1 | Surreal Composite Campaign

Name _____

Date _____

Use the supplied chair and moon sources to build a believable Moon-as-Balloon composite, then add an intentional product-ad or social-message layer. The earlier phone portal is the masking preflight, not the final assignment.

Assignment duration: three full 70-minute classes. Do not collapse the lighting build or the transfer challenge into filler time.

Three-class sprint

Class A · Diagnose, select and construct	Gallery diagnosis and a short phone-mask preflight lead into source compatibility, Moon selection, Smart Object placement, transform/distort and the first rough composite.
Class B · Make the impossible believable	Isolate the chair, rebuild contact and cast shadows, create the day-for-night grade and paint local moonlight on the chair, supports, seat and ribbon.
Class C · Communicate, test and transfer	Add glow/rim light, complete a believability audit, add a purposeful campaign message, revise after critique and prove one unpredictable live edit.

Pathways that add real complexity

Tier 1 Guided build	Complete the supplied Moon-as-Balloon composite with editable masks, coherent geometry, local light and shadow.
Tier 2 Creative variation	Change the scale, placement, crop or colour world while preserving believable interaction and a clear message.
Tier 3 Independent campaign	Transfer the workflow to new rights-safe assets and create an original surreal product advertisement or social-issue image.

Required evidence

1. Concept thumbnail and source-compatibility gate
2. Rough composite screenshot with Layers panel visible
3. Midpoint screenshot showing isolated local-light and shadow layers
4. Final layered PSD with named masks, adjustments and Smart Objects
5. Final campaign PNG plus before/after comparison
6. Source and asset log
7. Production defence and successful live-edit challenge

Foundation checkpoints

Day 1 Diagnose, select and construct	Concept thumbnail, compatibility gate, v01 PSD and a rough-composite screenshot with the Layers panel are saved.
Day 2 Make the impossible believable	Midpoint screenshot shows named chair isolation, contact shadow, cast shadow, global grade and at least two local moonlight layers.
Day 3 Communicate, test and transfer	Final campaign, before/after, layered PSD, source log, critique evidence and production defence are complete; student can perform one live adjustment.

Production defence

Name your strongest decision, one workflow safeguard, one revision after feedback and one technique you can demonstrate live:

Submission audit

- ☐ Concept thumbnail and source-compatibility gate
- ☐ Rough composite screenshot with Layers panel visible
- ☐ Midpoint screenshot showing isolated local-light and shadow layers
- ☐ Final layered PSD with named masks, adjustments and Smart Objects
- ☐ Final campaign PNG plus before/after comparison
- ☐ Source and asset log
- ☐ Production defence and successful live-edit challenge

Teacher confirms achievement. Retain the editable/process evidence with the final product.
