

A poster makes a promise

Multimedia 12 • visual communication, colour and typography

Decide what the viewer should notice, feel and understand.

Then show which choices create that result.

TRY • 2 MIN Without discussing first, write the first two things you noticed. Compare responses.

Audience, purpose and viewing context

A successful choice answers a particular communication problem.

WHO	Specific audience	Audience: who encounters the image?
WHY	Message / action	Purpose: what should they understand or do?
WHERE	Viewing context	Context: phone, notice board or public display?

TRY · 2 MIN For a community arts showcase, name the audience, purpose and viewing context.

Elements and principles

Elements are ingredients; principles describe their relationships.

Line, shape, form, space, colour, value and texture.

Balance, emphasis, movement, proportion, rhythm and unity.

Graphic layouts also use contrast, alignment and proximity.

TRY • 2 MIN Name one element and one relationship you could change in a poster.

Hierarchy and emphasis

Give the message an intentional reading order.

Emphasis establishes a focal point.

Hierarchy ranks the important information.

Size, placement, weight and contrast work together.

TRY · 2 MIN Predict the first, second and third reading order in each version; then identify the trade-off.

Balance and proportion

Different parts can carry similar visual weight.

Symmetric

Asymmetric

Symmetry can establish stability.

Asymmetry balances different sizes, values or positions.

Proportion concerns the size of one part relative to another.

TRY · 2 MIN Describe one change that would balance a large subject without duplicating it.

Contrast

Contrast is a visible difference with a job to do.

Stronger value contrast

Weaker value contrast

Light against dark.

Large against small.

Heavy type against lighter details.

Texture against a quieter area.

TRY • 2 MIN Identify which title is easier to read and explain the specific difference.

Alignment and proximity

Use shared edges and deliberate gaps to organise information.

COMMUNITY ARTS SHOWCASE

Friday · 7 pm
School hall

Tickets at the office

Shared edge; grouped event details

Alignment gives related items a visible structure.

Proximity groups items through distance.

An unrelated item should not appear to belong to the group.

TRY · 2 MIN Sketch a revised notice with one shared edge and two clear information groups.

Repetition, rhythm, unity and variety

Repeat a useful feature; introduce difference where it carries meaning.

Repeated shape and spacing; one purposeful change

Repetition reconnects related information.

Rhythm creates a visual sequence.

Unity makes the choices feel coherent.

Variety can distinguish an important change.

TRY · 2 MIN Choose one feature to repeat in a poster and one feature that should differ. Explain both jobs.

Space and visual identity

An image can suggest an idea through a carefully chosen form.

Negative space helps define the letters and enclosing shapes.

Scale and proportion affect recognition.

A logo and a full poster have different information jobs.

TRY · 2 MIN Identify two shapes and one useful gap; explain their roles without copying the brand mark.

Design principles in a real campaign

Recognition can make a small fragment communicate a larger identity.

The arches become directional cues.

Strong contrast supports the cropped symbol.

The treatment depends on prior brand recognition.

TRY · 2 MIN Individual check: identify two principles and one audience limitation.

Colour models

Name the model before naming the relationship.

R Y B	Traditional artist's model
-------	----------------------------

R Y B: a traditional artist's hue-wheel model.

R G B	Emitted light; digital storage
-------	--------------------------------

R G B: light used by screens and digital image files.

C M Y K	Process inks; output workflow
---------	-------------------------------

C M Y K: process inks; output depends on the production workflow.

TRY • 2 MIN Which model does our artist's wheel use, and which mode is the screen image stored in?

The RYB colour wheel

A schematic hue map for comparing relationships.

R red
O orange
Y yellow
G green
B blue
V violet

Primary families: red, yellow, blue.

Secondary families: orange, green, violet.

Intermediate families sit between their neighbours.

Equal sectors; RGB samples illustrate RYB hue families

TRY • 2 MIN Find an opposite pair and a neighbouring group. Name the model.

Hue, value and saturation

A useful palette changes more than hue.

Hue

Hue names the colour family.

Value

Value describes lightness or darkness.

Saturation

Saturation describes colour intensity.

TRY · 2 MIN Keep the hue family and change a property that could improve title visibility.

Palette relationships

Use harmony as a starting point, then test the design.

Complementary

Complementary: opposite hue families.

Analogous

Analogous: neighbouring families.

Triadic

Triadic: three families spaced around the named wheel.

Split complementary

Split complementary: a base and neighbours of its opposite.

TRY · 2 MIN Choose two different starting relationships for one event message. Explain what you would test.

Colour roles and proportions

Choose what each colour does in the image.

Dominant

#18384F

Support

#8CBAB8

Accent

#F4B860

Background

#F6F0E6

Text

#17232B

Dominant and supporting colours establish the treatment.

An accent directs a limited area of emphasis.

Background and text colours need a readability check.

TRY · 2 MIN Give five colours roles. Name which one you would use least and why.

Colour meaning needs context

A colour choice is a claim you must examine.

A colour can identify a particular organisation.

Contrast and repetition support this identity.

Meaning depends on source, audience and setting.

TRY · 2 MIN Separate one visible colour observation from the designer's stated intention and your own interpretation.

Create and transfer a palette

Use Adobe Color, then carry exact colours into production.

Develop two palette candidates for the same brief.

Record HEX values and assign colour roles.

In Photoshop, open Window → Swatches and add named colours.

TRY · 2 MIN Export or record your five chosen values; apply two to a title/background comparison.

Typography has communication roles

Choose a voice and a readable information structure.

Typeface: the visual design of the characters.

Weight and size distinguish information roles.

Hierarchy matters before adding extra typefaces.

TRY • 2 MIN Name one typographic relationship and one legibility limitation in this real identity.

Kerning and tracking

One pair and a selected run need different controls.

AV

A V

Pair: kerning

Kerning changes the gap between a character pair.

Tracking changes spacing across a selected range.

ARTS SHOWCASE

Inspect the visible result at the intended size.

A R T S S H O W C A S E

TRY • 2 MIN A gap between A and V is awkward, but the rest of the title is fine. Which control and selection are appropriate?

Leading and alignment

Manage the lines as well as the letters.

A story told in two lines

Baseline → baseline = leading

A shared reading edge
organises this text.

Leading sets the distance
between text baselines.

Alignment establishes the shared
reading edge.

Check line breaks and proximity
to other information.

TRY · 2 MIN Diagnose the cramped two-line message. Name the control and one thing to keep constant.

Typography in Photoshop

Match the control to the problem you observed.

Select the Type layer and the relevant text.

Use the Character controls for size, leading, kerning or tracking.

Keep the Type layer editable for the next revision.

TRY · 2 MIN Locate one pair control and one range control in the image. Explain when each is useful.

A photographic communication cue

A catalogue image relates product, typography and historical context.

An image can suggest a product and a setting.

Visible objects are evidence; intentions need a source.

A historical catalogue is a different encounter from a modern event identity.

TRY · 2 MIN Record one visible observation, one sourced historical fact and one possible interpretation.

Historical and current image analysis

Compare decisions and contexts, not which image you prefer.

IKEA catalogue · 1951

Design Festival · 2025

Compare the communication problem and encounter.

Describe visible form before interpretation.

Use dated sources to explain context.

TRY · 2 MIN Write a comparison containing two visible features, two sourced contextual facts and one limitation.

Apply and retrieve

Design two treatments before choosing one.

PLAN

Three distinct alternatives

Three distinct thumbnails for your own event message.

CREATE

Two treatments for one direction

Two colour/type treatments for the selected direction.

JUSTIFY

Audience + purpose + evidence

Choose using audience, purpose and viewing evidence.

TRY · 8 MIN Make your first three thumbnail directions. Below them, state the audience and message in one sentence.
