

Decode the Impossible Composite

F-P-MM12-1.1 | Decode the Impossible Composite

Name _____

Date _____

Tier 1 builds an editable phone portal. Tier 2 adds a masked subject that breaks the phone frame. Tier 3 transfers the method to original, rights-safe assets.

Assignment duration: three 70-minute classes. Two-class option: combine the final test, revision and submission audit with Class B.

Three-class sprint

Class A · Construct	Build the layered phone portal, preserve Smart Objects and create the screen mask. Finish with a Layers-panel checkpoint.
Class B · Break the frame	Add the masked butterfly, create one crossing edge and one tucked edge, then integrate it with tone and a contact shadow.
Class C · Prove and deliver	Run edge, value, lighting and peer-believability tests; revise once; export and complete the production defence.

Required evidence

1. Layered PSD with clearly named layers
2. One progress screenshot showing the Layers panel
3. Final web export
4. Source and asset log
5. Short production defence

Foundation checkpoints

Day 1 Layers before effects	PSD saved in 02_working; Phone Base and Forest Portal remain separate; checkpoint screenshot includes the Layers panel.
Day 2 Masks conceal without deleting	The butterfly has an editable mask; the image thumbnail is untouched; edge test screenshot shows the mask and one problem you repaired.
Day 3 The phone becomes a portal	No forest pixels cross the inner bezel; every corner is covered; portal adjustments are clipped; v01 still exists.

Day 4 Out of bounds	The subject has a crossing edge and a tucked edge; the contact shadow touches the correct surface; both source and masks remain editable.
Day 5 Polish and defend	A peer can identify the intended portal and crossing edge within five seconds; all five evidence items are present.

Production defence

Name your strongest decision, one workflow safeguard, one revision after feedback and one technique you can demonstrate live:

Submission audit

- ☐ Layered PSD with clearly named layers
- ☐ One progress screenshot showing the Layers panel
- ☐ Final web export
- ☐ Source and asset log
- ☐ Short production defence

Teacher confirms achievement. Retain the editable/process evidence with the final product.
